(024) CLAIMS

1	1.	An absorbent mat assembly comprising:	
2	a mat including a raised perimeter forming a recess having a substantially		
3	upright side wall and a land formed contiguous to the substantially upright side wall;		
4	an ab	sorbent pad having a perimeter substantially equal to a perimeter of the	
5	recess, the absorbent pad disposed within the recess;		
6	a fluid	d permeable mesh secured to the mat, the fluid permeable mesh	
7	including an ear extending from a periphery of the fluid permeable mesh, the ear		
8	configured to seat upon the land of the mat; and		
9	a connector for removably securing the fluid permeable mesh to the mat.		
1	2.	The absorbent mat assembly of claim 1 wherein the mat further	
2		material formulated of recycled polymer.	
Z	comprises a	material formulated of recycled polymer.	
1	3.	The absorbent mat assembly of claim 1 wherein the mat further	
2	comprises a	petroleum impermeable material.	
1	4.	The absorbent mat assembly of claim 1 wherein the absorbent pad	
2	further comprises a polypropylene pad.		
1	5.	The absorbent mat assembly of claim 1 wherein the absorbent pad	
2	further comprises a reusable pad.		
1	6.	The absorbent mat assembly of claim 1 wherein the absorbent pad	
_			
2	iuπner comp	orises a washable pad.	
1	7.	The absorbent mat assembly of claim 1 wherein the absorbent pad	
2	further comp	prises a recyclable pad.	

1	8.	The absorbent mat assembly of claim 4 wherein the polypropylene pad	
2	further comprises a woven polypropylene backer and a spun polypropylene liner		
3	attached to the woven polypropylene backer.		
1	9.	The absorbent mat assembly of claim 1 further comprising a backflow	
2	prevention member disposed between the mat and the absorbent mat, the backflow		
3	prevention member including a sheet of polymeric material.		
1	10.	The absorbent mat assembly of claim 1 wherein the petroleum	
2	resistant mesh further comprises an extruded polymeric mesh.		
	•		
1	11.	The absorbent mat assembly of claim 1 wherein the mesh retaining	
2	element further comprises a plastic retaining stud insertable within an aperture		
3	formed within the mat.		
1		An absorbent mat assembly comprising:	
2		including a raised perimeter forming a recess having a substantially	
3	upright side wall and a land formed contiguous to the substantially upright side wall;		
4	a reusable absorbent pad placed within the recess, the reusable absorbent		
5	pad having a perimeter substantially equal to a perimeter of the recess;		
6	a backflow prevention member disposed within the recess against an upper		
7	surface of the absorbent pad;		
8	a fluid permeable mesh secured to the mat, the fluid permeable mesh		
9	including a center portion including a face disposed about a periphery of the center		
10	portion of mesh, the fluid permeable mesh including an ear extending from the		
11	center portion of the fluid permeable mesh in a plane substantially perpendicular to a		
12	surface of the face disposed about the periphery of the center portion of mesh, the		
13	ear configured to seat upon the land of the mat; and		
14	a mesi	h retaining element for removably securing the petroleum resistant	

15

mesh to the mat.

- 1 13. The absorbent mat assembly of claim 12 wherein the mat further comprises a petroleum impermeable material.
- 14. The absorbent mat assembly of claim 12 wherein the absorbent pad
 2 further comprises a polypropylene pad.
- The absorbent mat assembly of claim 14 wherein the polypropylene
 pad further comprises a woven polypropylene backer and a spun polypropylene liner
 attached to the woven polypropylene backer.
- The absorbent mat assembly of claim 12 wherein the backflow
 prevention member further comprises a sheet of polymeric material.
- 1 17. The absorbent mat assembly of claim 12 wherein the petroleum
 2 resistant mesh further comprises an extruded polymeric mesh.
